

Armour Wire Anchor Clamp (AWAC)_Square

Supplied unsplit

Supplied split

Armour Wire Anchor Clamp (AWAC), also known as Armor Clamp

The AWAC is used to anchor an armoured cable to a structure such as manhole wall or concrete abutment. The armour wires are peeled back and clamped between the base plate and the ring to ensure that the cable does not slip away during its service life.

Can be supplied unsplit (whole) or split.

Unsplit (whole) is used in new installations where the AWAC can be installed on the cable before cable joint is complete.

Split is used where the cable is already installed and cable end is inaccessible.

Specifications	
Material	G316 Stainless Steel
Square Plate	185mm x 185mm – 20mm thickness Internal hole 75mm Diameter Fasteners: 4 x M12x100mm Dynabolts
Disc	185mm Outside Diameter - 16mm thickness Internal Hole 75mm Diameter Fasteners: 8 x M12x90mm countersank bolts
Weight	8kg
